NASEER KHAN MOHAMMAD

DEVOPS ENGINEER | CERTIFIED AZURE ADMINISTRATOR | CLOUD INFRASTRUCTURE | CICD | KUBERNETES | TERRAFORM | AI-OPS

+91-9063864264 | naseerkhandevops@gmail.com | Open to Relocate Globally | HYDERABAD-INDIA

Portfolio profile: https://naseerkhandevops.github.io/naseerkhan-devops-5Years-Relocation/

Linked In Profile: https://www.linkedin.com/in/naseer-khan-mohammad-071278255/

PROFESSIONAL SUMMARY

- Having 5 years of experience in DevOps, software configuration, CI/CD automation, application deployment, and environment management.
- Worked in Agile/Scrum environments, occasionally acting as Scrum Master during sprints and stand-ups.
- Hands-on experience supporting production releases, raising Change Requests (CRs), coordinating approvals, and ensuring smooth deployment.
- Strong understanding of software development, debugging, troubleshooting, and release management.
- Strong experience in Azure PaaS, App Registrations, Azure File Share, Key Vault.
- Expertise in GitLab, Git, Azure Cloud, DevOps, Kubernetes and Terraform-Basics (IaC).
- Experience collaborating directly with clients, business teams, product owners, and participating in requirement discussions.
- Work independently on engineering tasks, ensuring timely delivery and adherence to company standards.
- Collaborate closely with clients, partners, and cross-functional teams to understand requirements and align solutions.
- Participate in requirement analysis, sprint planning, discussions, and production readiness meetings.
- Lead and coordinate production deployments, raise Change Requests (CRs), and follow up with CAB for approvals.
- Occasionally I act as Scrum Master, facilitating daily standups, sprint planning, and reviews.
- Provide mentoring and technical guidance to junior team members and contribute to internal knowledge-sharing sessions.
- Collaborated directly with client teams during high-volume business events, including Black Friday sales periods, to monitor platform performance, manage incidents, and ensure uninterrupted service availability.
- Strong additional hands-on learning and capstone exposure to AWS, EKS, Jenkins, GitHub Actions, Prometheus, Grafana, ELK, DevSecOps, Trivy, Istio and AI-assisted DevOps

CORE COMPETENCIES

Azure Cloud & Infrastructure	**Azure DevOps & GitLab CI/CD**	**Terraform & IaC**	**Kubernetes / AKS & Docker**
CI/CD Pipeline Automation	**Azure Networking & Security**	**Monitoring & Incident Response**	**Production Troubleshooting**
Artifact Management & ACR	**Git, GitLab & Branching Strategies**	**Jira / Agile Delivery**	**Cloud Platform Operations**

TECHNICAL SKILLS

Cloud: Microsoft: Azure, AWS (Beginner), Azure Kubernetes Service (AKS), Azure Container Registry (ACR), Storage, Key Vault, Networking
DevOps & CI/CD: Azure DevOps, CI/CD, GitLab administration, pipeline automation, deployment workflows, approvals, service integrations
IaC & Automation: Terraform, reusable modules, terraform state, plan/apply workflows, Azure CLI, scripting and automation
Containers: Kubernetes, AKS, Docker, Helm, container lifecycle management, troubleshooting, image management
Networking & Security: VNets, subnets, NSGs, private connectivity, routing, access control, secrets management, RBAC
Monitoring & Operations: New Relic, PagerDuty, production monitoring, alerting, incident response, root-cause analysis.
Source Control & Collaboration: Git, GitLab, merge requests, branch protection, Jira, Agile/Scrum
Platform Services: Key-cloak, SonarQube, Artifactory/Xray, platform tooling

PROFESSIONAL EXPERIENCE

Organization: INFOSYS Limited Hyderabad

Role: Azure DevOps Engineer *May 2023 - Present*

#1 Project: CURRYS-UK | E-commerce platform

Client: Currys is the UK's largest consumer electronics and electrical appliance retailer, offering omnichannel shopping across over 691 stores and online. Founded in 1884 Leicester by Henry Curry as a bicycle manufacturer before expanding into household electronics

- Manage and support Microsoft Azure infrastructure across multiple environments, ensuring stability, security, scalability, and production readiness.
- Automate cloud infrastructure provisioning and lifecycle management using Terraform and GitLab CI/CD, following Infrastructure as Code (IaC) best practices.
- Design, develop, and maintain CI/CD pipelines for infrastructure and application deployments, including validation, approvals, deployment, and troubleshooting.
- Work with Terraform workflows such as init, validate, plan, and apply to provision and manage Azure resources in a controlled manner.
- Support Kubernetes (AKS) environments and containerized applications, including deployments, services, ConfigMaps, secrets, storage, networking, and operational troubleshooting.
- Implement and maintain Helm-based deployment strategies to enable consistent and repeatable application releases across environments.
- Administer GitLab platform operations, including repositories, merge requests, CI/CD configuration, runners, and pipeline management.
- Support Docker-based application workflows, container image lifecycle management, image validation, registry management, and deployment troubleshooting.
- Contribute to the migration of container artifacts from JFrog repositories to Azure Container Registry (ACR), ensuring seamless transition and deployment validation.
- Manage Azure networking and security services, including VNets, subnets, NSGs, routing, private connectivity, RBAC, Key Vault integrations, and access management.
- Monitor Azure and Kubernetes platforms using New Relic and support incident management activities through PagerDuty, ensuring timely issue resolution and service restoration.
- Troubleshoot infrastructure, application, networking, CI/CD, Terraform, Kubernetes, and container-related issues through log analysis, events, and configuration reviews.
- Support and maintain enterprise platform services running on Kubernetes, including GitLab, Keycloak, Consul, Vault, SonarQube, and Artifactory/Xray.
- Collaborate with development, QA, security, and infrastructure teams to support releases, deployments, upgrades, and production operations.
- Manage incidents, service requests, changes, and project deliverables using Jira while maintaining operational documentation and knowledge-sharing practices.
- Perform root cause analysis for recurring issues and implement corrective actions to improve platform reliability, deployment efficiency, and operational excellence.

PROFESSIONAL EXPERIENCE

Organization: WIPRO Limited Hyderabad

Role: Azure & Linux Admin *October 2021 – January 2023*

#2 Project: British Airways - UK | International Airlines

Client: British Airways is the principal flag carrier airline of the United Kingdom. Owned by the International Airlines Group (IAG) and serves as the national airline connecting Britain globally for over a century and flies to around 200 destinations across more than 65 countries globally**.**

- Administered and supported Microsoft Azure resources and Linux-based infrastructure in enterprise production environments.
- Managed Azure Virtual Machines, including provisioning, configuration, maintenance, monitoring, and troubleshooting.
- Performed Linux server administration tasks such as user and group management, permissions management, package updates, service management, and system maintenance.
- Monitored server health, performance, and resource utilization, including CPU, memory, disk usage, and service availability.
- Supported Azure networking components including VNets, subnets, NSGs, public/private IPs, and connectivity troubleshooting.
- Conducted operating system patching, configuration changes, routine maintenance, and health checks while adhering to change management procedures.
- Troubleshot Linux, Azure VM, application, network, and service-related issues through log analysis and root cause investigation.
- Supported backup, recovery, and operational maintenance activities to ensure system availability and reliability.
- Managed incidents and service requests, ensuring timely resolution and compliance with SLA requirements.
- Assisted with production deployments, maintenance activities, environment validation, and post-implementation support.
- Worked with monitoring and alerting tools to proactively identify and resolve infrastructure issues.
- Maintained operational documentation and followed incident, change, release, and problem management processes.
- Collaborated with application, database, network, and infrastructure teams to resolve cross-functional issues and improve service stability.

ADDITIONAL TECHNICAL EXPOSURE & HANDS-ON LEARNING

The following technologies and practices were developed through structured learning, hands-on labs and capstone work. They are intentionally separated from professional project experience to accurately reflect practical knowledge without overstating production ownership

Multi-Cloud : AWS cloud fundamentals, global infrastructure, Regions and Availability Zones, compute, storage, networking, EKS.
CI/CD Automation: Jenkins and GitHub Actions concepts, reusable workflows, build/deployment automation, secrets management, multi-environment delivery.
Observability: Prometheus, Grafana and ELK concepts covering metrics, dashboards, centralized logging and operational visibility.
DevSecOps: SonarQube, Trivy, vulnerability scanning, secure CI/CD, secret management and Kubernetes security fundamentals.
Service Mesh: Istio concepts including service mesh architecture, traffic routing, mTLS and secure microservices communication.
AI / AIOps: AI-assisted troubleshooting, AI log analysis, AI-generated YAML/Terraform, root-cause analysis, GitHub Copilot and ChatGPT-based DevOps workflows.

ENTERPRISE MULTI-CLOUD DEVOPS & DEVSECOPS CAPSTONE

Learning-focused capstone integrating Azure, AWS, Terraform, Jenkins, GitHub Actions, Kubernetes, monitoring/logging, DevSecOps and AI-assisted operations.

- Built a learning-focused multi-cloud DevOps and DevSecOps capstone integrating Azure and AWS concepts. Practiced Terraform-based infrastructure provisioning concepts including modules, state management and remote backend approaches.
- Designed CI/CD workflow exercises using Jenkins and GitHub Actions for build and deployment automation.
- Practiced Docker containerization and Kubernetes deployment patterns across AKS/EKS learning environments.
- Worked through Kubernetes resources including Pods, Deployments, Services, Ingress, ConfigMaps and Secrets, with Helm-based packaging concepts.
- Explored Prometheus, Grafana and ELK concepts for metrics, dashboards and centralized logging.
- Applied DevSecOps learning through SonarQube, Trivy, vulnerability scanning, secret management and secure CI/CD concepts.
- Explored Istio service-mesh concepts including traffic routing, mTLS and secure microservices communication.
  Applied AI-assisted DevOps techniques for log analysis, troubleshooting, YAML/Terraform generation and root-cause analysis.

CERTIFICATIONS

- **Microsoft Certified: Azure Administrator Associate (AZ-104)**

Certification reference: Microsoft Learn – Azure Administrator Associate / Exam AZ-104

- **Generative AI**

Certification reference: Infosys Internal

ACHIVEMENTS & AWARDS

- ✓ INSTA awards round clock availability to the client to troubleshoot DevOps issues.
- ✓ INSTA award for quick responses to the client requirements.
- ✓ CURRYS WORRIER for supporting the peak sales and collaboration with client visits.

EDUCATION

B.com Computers | Shantiniketan Degree college | Mahatma Gandhi University | 2018
