NASEER KHAN MOHAMMAD

AZURE DEVOPS ENGINEER | CLOUD INFRASTRUCTURE | CI/CD AUTOMATION | KUBERNETES | TERRAFORM

Hyderabad, India | Open to Relocation to Dubai, UAE | LinkedIn | Portfolio

PROFESSIONAL SUMMARY

Microsoft Certified Azure Administrator (AZ-104) and DevOps Engineer with approximately 5 years of experience in Azure cloud infrastructure, CI/CD automation, production deployments, Linux administration, Kubernetes, containerization, and enterprise platform operations. Currently working with Infosys Limited, supporting cloud infrastructure and DevOps operations for Currys UK, with previous experience at Wipro Limited supporting British Airways.

Hands-on expertise in Microsoft Azure, GitLab CI/CD, Azure DevOps, Terraform, Azure Kubernetes Service (AKS), Docker, Helm, Azure Container Registry (ACR), Azure networking, Key Vault, RBAC, infrastructure troubleshooting, and production incident management. Experienced in Infrastructure as Code (IaC), cloud infrastructure provisioning, release management, change management, root cause analysis, and monitoring using New Relic and PagerDuty.

Additional hands-on learning exposure to AWS, EKS, Jenkins, GitHub Actions, Prometheus, Grafana, ELK, DevSecOps, and AI-assisted DevOps workflows. Experienced in Agile/Scrum environments, stakeholder coordination, production readiness, and cross-functional collaboration. Seeking Azure DevOps Engineer, Cloud DevOps Engineer, DevOps Engineer, or Cloud Infrastructure Engineer opportunities in Dubai and the wider UAE.

CORE TECHNICAL COMPETENCIES

Azure Cloud Infrastructure • Azure DevOps • GitLab CI/CD • CI/CD Pipeline Development • Infrastructure as Code (IaC) • Terraform • Azure Kubernetes Service (AKS) • Kubernetes Administration • Docker • Helm • Azure Container Registry (ACR) • Linux Administration • Azure Networking • Cloud Security • Azure Key Vault • Role-Based Access Control (RBAC) • Production Deployment & Release Management • Incident & Change Management • Monitoring & Troubleshooting • Root Cause Analysis (RCA) • Agile/Scrum • Enterprise Platform Operations

TECHNICAL SKILLS

Cloud Platforms: Microsoft Azure, Azure PaaS, Azure Virtual Machines, Azure Storage, Azure File Share, Azure Key Vault, Azure App Registrations, Azure Container Registry, Azure Kubernetes Service; AWS fundamentals

DevOps & CI/CD: GitLab CI/CD, Azure DevOps, Git, GitLab Administration, Pipeline Automation, CI/CD Workflows, Deployment Approvals, Release Management

Infrastructure as Code & Automation: Terraform, Terraform Modules, State Management, Terraform Init/Validate/Plan/Apply, Azure CLI, Infrastructure Provisioning

Containers & Orchestration: Kubernetes, AKS, Docker, Helm, Container Registry Management, ConfigMaps, Secrets, Deployments, Services

Networking & Security: Azure Virtual Networks (VNets), Subnets, Network Security Groups (NSGs), Private Connectivity, Routing, Access Management, RBAC, Secrets Management

Monitoring & Operations: New Relic, PagerDuty, Incident Response, Log Analysis, Production Troubleshooting, Root Cause Analysis

Enterprise Tools: Jira, SonarQube, JFrog Artifactory, Xray, Keycloak, Consul, Vault

Additional Hands-on Learning: AWS, Amazon EKS, Jenkins, GitHub Actions, Prometheus, Grafana, ELK Stack, Trivy, Istio, GitHub Copilot, AI-assisted DevOps

PROFESSIONAL EXPERIENCE

Azure DevOps Engineer

Infosys Limited | Hyderabad, India May 2023 - Present

Client / Project: Currys UK - Enterprise E-Commerce Platform

- Manage and support Microsoft Azure cloud infrastructure across multiple environments, focusing on platform stability, security, scalability, and production readiness.
- Automate Azure infrastructure provisioning and lifecycle management using Terraform and GitLab CI/CD, applying Infrastructure as Code principles.
- Design, develop, maintain, and troubleshoot CI/CD pipelines for application and infrastructure deployments, including validation, approvals, and controlled releases.
- Execute Terraform workflows, including initialization, validation, planning, and application, to provision and maintain Azure resources.
- Support Azure Kubernetes Service (AKS) clusters and containerized applications, including deployments, services, ConfigMaps, secrets, storage, networking, and operational troubleshooting.
- Implement and maintain Helm-based deployment configurations to support consistent application releases across environments.
- Administer GitLab repositories, merge requests, CI/CD configurations, runners, and pipeline operations.
- Support Docker container workflows, container image validation, registry management, and deployment troubleshooting.
- Contribute to container artifact migration from JFrog repositories to Azure Container Registry, including transition support and deployment validation.
- Configure and troubleshoot Azure networking and security components, including VNets, subnets, NSGs, routing, private connectivity, RBAC, and Key Vault integrations.
- Monitor Azure and Kubernetes environments using New Relic and coordinate incident management through PagerDuty.
- Investigate infrastructure, networking, application, Kubernetes, Terraform, and CI/CD issues through log analysis, event monitoring, and configuration reviews.
- Support enterprise Kubernetes-based platform services, including GitLab, Keycloak, Consul, Vault, SonarQube, and Artifactory/Xray.
- Coordinate production deployments, raise Change Requests, follow up on Change Advisory Board (CAB) approvals, and support release readiness.
- Collaborate with development, QA, security, infrastructure, product owners, and client stakeholders to support deployments, platform upgrades, and production operations.
- Manage incidents, service requests, changes, and technical documentation using Jira.
- Conduct root cause analysis and implement corrective actions to support platform reliability and operational improvement.
- Support peak business events, including Black Friday sales periods, through platform monitoring, incident coordination, and direct client collaboration.
- Participate in Agile/Scrum activities, occasionally facilitating stand-ups, sprint planning, and reviews, while providing technical guidance to junior team members.

Azure & Linux Administrator

Wipro Limited | Hyderabad, India October 2021 - January 2023

Client / Project: British Airways - Enterprise IT Infrastructure

- Administered and supported Microsoft Azure resources and Linux infrastructure in enterprise production environments.
- Provisioned, configured, maintained, monitored, and troubleshot Azure Virtual Machines.
- Performed Linux server administration, including user and group management, access permissions, package updates, service management, and system maintenance.
- Monitored infrastructure performance and resource utilization, including CPU, memory, disk usage, and service availability.
- Supported Azure networking components, including VNets, subnets, NSGs, public/private IP addressing, and connectivity troubleshooting.
- Performed operating system patching, configuration changes, maintenance activities, and infrastructure health checks in accordance with change management procedures.
- Investigated Linux, Azure VM, application, networking, and service-related incidents using log analysis and troubleshooting techniques.
- Supported backup, recovery, and routine infrastructure maintenance activities.
- Managed incidents and service requests in accordance with operational procedures and SLA requirements.
- Assisted with production deployments, environment validation, maintenance windows, and post-deployment support.
- Worked with monitoring and alerting tools to identify infrastructure issues and coordinate timely resolution.
- Maintained operational documentation and followed incident, problem, change, and release management processes.
- Collaborated with application, database, network, and infrastructure teams to resolve technical issues and support service stability.

ADDITIONAL TECHNICAL PROJECT

Enterprise Multi-Cloud DevOps & DevSecOps Capstone

Hands-on Learning Project - Azure, AWS, CI/CD, Kubernetes, Observability & AI-Assisted Operations

- Developed a learning-focused multi-cloud DevOps and DevSecOps capstone incorporating Microsoft Azure and AWS concepts.
- Practiced Terraform infrastructure provisioning, reusable modules, state management, and remote backend approaches.
- Designed CI/CD workflow exercises using Jenkins and GitHub Actions for build and deployment automation.
- Practiced Docker containerization and Kubernetes deployment patterns across AKS and EKS learning environments.
- Worked with Kubernetes resources, including Pods, Deployments, Services, Ingress, ConfigMaps, and Secrets.
- Explored Helm-based application packaging and deployment concepts.
- Practiced monitoring and observability concepts using Prometheus, Grafana, and ELK Stack.
- Applied DevSecOps learning through SonarQube, Trivy, vulnerability scanning, secrets management, and secure CI/CD practices.
- Explored Istio service mesh architecture, traffic routing, mutual TLS, and microservices communication.
- Used AI-assisted techniques for troubleshooting, log analysis, YAML and Terraform generation, and root cause analysis.

CERTIFICATIONS

Microsoft Certified: Azure Administrator Associate (AZ-104) Microsoft

Generative AI Certification Infosys - Internal Certification

PROFESSIONAL AWARDS & RECOGNITION

- INSTA Award: Recognized for availability and responsiveness in resolving client DevOps issues.
- INSTA Award: Recognized for timely responses to client requirements.
- Currys Warrior Recognition: Recognized for supporting peak sales operations and collaboration during client visits.

EDUCATION

Bachelor of Commerce (B.Com) - Computers Shantiniketan Degree College, Mahatma Gandhi University | 2018
